EP 00305967A2

L9: 34 of 51

ABSTRACT:

&emsp;&emsp;&emsp;&emsp;The \*\*conjugates\*\* consist of a \*\*cytokine\*\*, for example interferon alpha, and human immunoglobulin, if required linked via an organic bridge and are used in pharmaceutical preparations for the treatment of viral infections and tumours. Compared with the free \*\*cytokine\*\*, the \*\*conjugates\*\* have a longer residence time in the plasma and tissue and thus improve the therapeutic effect.
